EDITORIAL (Vol. 2, No. 2, 2009)

I am glad to present a new issue of the Sutra journal. This issue contains four papers. Interesting applications of graph theory are discussed in the first expository paper. Second paper presents results from a project conducted at Texas A&M International University. Next two short papers present a method for solving general quartic equation, and a number theoretic identity.

I hope that readers will enjoy reading this issue.
